Boss audio kit2

stereo applications. It's a good value and it works well. Ground wire could be longer, but no reason to lower the rating. Verified purchase: Yes Condition: New. The cables were not the size they advertised on the box. The speaker terminal blades and all the connectors were junk. The cable were so flimsy I called and complained to Boss Audio and they did send me a new kit to use. But I will probably send it back and not use the Boss Audi. It was very nice to have all the right stuff to install my new amp. Great quality. Skip to main content. About this product. Make an offer:. Stock photo. See details for additional description. It is a good kit for the money, wish it could come with a couple more feet in the power wire , barely had enough to run from my battery on the front passenger side of truck to behind the seat in my standard cab 79 Ford truck by the time you run everything nice and neat but only hole in my fire wall was on driver side under the brake booster lol so I had to go from my battery front passenger side then across the firewall to driver side then bringing it out under the middle of my dash and ran it on top my transmission tunnel under the carpet and seat to back of my cab and maybe had an inch of slack so it limits where I can mount the amp which where I had to mount it wasn't where I planned but I can deal with it lol, says the kit only called for 17' but if they'd bump it up to 20' I would give it 5 stars and be perfect but all in all it's a good bang for the buck, has all the ends and everything you need with zip ties Read full review. Verified purchase: Yes Condition: New. This is a decent product. It made hooking up an external amplifier easy. However, no matter how careful I was when cutting the power wire to splice on connections, a large portion of the copper wires would break off diminishing the effective size of the wire. I have spliced many wires in my day and have never had this much of a problem with wire breaking. The insulation appears to be very good, so I think it will perform fine once an installer gets past this stepo. First off shipping was like lightning, ordered on a Sunday had delivered by Tuesday. Wires work great and maneuver great. Only thing that wasn't impressive was the conduit, was clearly of a lower quality material that would stress and bind but eventually got power wire in. No reason for a poor review though, especially since I didn't even expect any conduit. Not bad for the price. Not winning any dB drags but not expecting to either. Great value for what you pay. Will show up in soft envelope so picky buyers take caution. Could have damage if Mail Carriers are slop
