A winter visit is a chance to see what the park looks like for the rest of the year! Whether you are just around for a short walk through the woods, or are coming for a lengthy ski or snowshoe adventure, you'll have a chance to experience the "real" Denali. Along the way, you'll notice some of the things that make this such a beautiful part of the world:. Depending on conditions and your interest, you could spend all day exploring Denali under your own power. We suggest preparing for at least a half-hour, so you can really get a sense of the stillness and peacefulness that is Alaska in winter. Working animals are allowed anywhere in Denali. This means, for example, that you may ski-jor with your dog ski-joring is where a dog is in a harness and helps pull you as you cross-country ski. Pets may also be walked on the park road and some trails, on a 6' or shorter leash. Learn more about visiting Denali with pets. There are no special fees for recreating in the park, although there is an overall park entrance fee. It's a great starting point for you to acquire trail maps and learn about conditions before setting off, or warm up by the fire after some time spent outdoors. We consider "winter" to start by October, although in some years there isn't very much snow until November or even December. Once snow has arrived, it usually stays until April. Technically, Denali never closes - so if you wish to ski or hike by moonlight, you are welcome to do so. For safety's sake, however, we suggest you do the majority of your recreation during daylight hours. In the darkest part of winter i. Check out the latest winter trail conditions with the map below. Until it snows enough to make winter travel possible, this map will not have current conditions information. Instead, it will have blue lines that indicate common trail routes. Once snow falls, and rangers travel various trails, updates will display on this map. Trails will be color-coded to indicate relative difficulty. There will also be icons that indicate where the park sled dogs have recently travelled. Explore This Park. Along the way, you'll notice some of the things that make this such a beautiful part of the world: Low-angle sunlight Photographers talk about the "golden hour," when the sun is low in the sky at dawn or dusk and the landscape gets a gentle golden or reddish hue. This far north, the sun hangs low in the sky most of the time that it is up, meaning the landscape often has a magical, soft light on it. Tranquility With just a few visitors coming each day in winter, this is an opportunity to feel like you're in an incredibly remote and peaceful world, just a few minutes away from the winter visitor center. Stars With short days and long nights, star gazing is possible from early evening through late morning.

The Big Dipper, Orion and other constellations become vivid thanks to very little light pollution. Pets Allowed. Activity Fee. Trails are of course always hike-able, even when there is no snow. Time of Day. All trails in Denali can be uneven terrain once snow falls and boots pack down a path on them. The Denali Park Road is plowed in winter as far as Park Headquarters, and the snow is groomed for several miles beyond that point. The snow will sometimes remain loose or unconsolidated, however, so use caution if proceeding beyond Park Headquarters. Backcountry Trail Conditions Check out the latest winter trail conditions with the map below. Last updated: December 31, Denali is six million acres of wild land, bisected by one ribbon of road. Make sure you know how, when, and where to look for the aurora , and then help make your aurora-viewing experience as exciting and rewarding as possible by setting reasonable expectations before your trip. Make no mistakeâ€"seeing the aurora is just as awe-inspiring as you likely hope it will be. But pictures often represent phenomena like the aurora differently than how our own eyes are capable of perceiving them. When photographers use cameras to take photos of the aurora and the night sky, they use long exposures. To take each photograph, the camera lens is left open for several seconds at a time. Because the sky is dark and the aurora is relatively faint, collecting those photons for many seconds allows the photograph to appear brighter than the same scene will to your eye. You can improve your own nighttime eyesight by allowing your eyes at least 30 minutes outside to adjust to the dark and avoiding bright light sources, such as flashlights or cell phones. The aurora as well as the stars, the Milky Way, and anything else you might hope to see will start to appear brighter to your dark-adapted eyes. When the aurora is extremely faint, it may appear mostly white to you. Seeing other colors like reds and purples is extremely rareâ€"consider yourself very lucky if you get to witness this! Finally, be aware that time lapses and videos can exaggerate the movement of the aurora. More commonly, it appears as a more stationary band of light that could take several minutes to slowly move in a wave across the sky. Light Pollution Denali is a great location for viewing the aurora because we are located at a far northern latitude and because there is very limited light pollution. Light pollution is found in towns, cities, and other developed areas where excessive artificial light brightens the natural environment. Dark night skies are valued by people who enjoy stargazing and aurora-viewing as well as by astronomers studying our universe through telescopes. The ability to identify constellations, to pass down

stories about the night sky, and to develop an appreciation for observing planets, galaxies, and other wonders of the night sky are all at risk when people do not grow up with these experiences. Light pollution is a quickly-reversible form of pollution, so you can make a difference and help keep night skies dark for people and animals alike. Limited and thoughtful outdoor lighting is both environmentally friendly and energy efficient, as light is not wasted shining into the sky or into other areas where it is not needed. Choose night-sky-friendly lighting for your home and encourage your neighbors to do the same. Why Dark Skies Matter Although the night sky is appreciated by many, it is physically intangible and has taken longer to be recognized as a natural resource that requires protection. Today, the National Park Service studies the night sky and has scientists who work to protect it. Dark skies provide people with an opportunity to connect with our past and with our culture as we identify constellations and pass stories down through generations. They can humble us as we contemplate the size of our solar system, our galaxy, and the universe. They are also a critical component of natural ecosystems and are relied upon by wildlife to survive in the naturally dark environments they are adapted to. If you enjoy stargazing, you might already be familiar with some of the most well-known Greek constellations such as Ursa Major, Ursa Minor, Orion, and Cassiopeia. But Alaska Native people have paid attention to the stars for thousands of years and have their own constellations and associated star stories. Learn More About the Aurora.
